Sets

- {}.
- $\bullet \ \in, \subset, \emptyset$
- These satisfy certain axioms.

イロト イヨト イヨト イヨト

Sets

- {}.
- $\bullet \ \in, \subset, \emptyset$
- These satisfy certain axioms.
- $\bullet\,$ The meaning of the symbols are not given per say... You can read \in as "is an ancester of ".

Image: A math a math

Sets

- {}.
- $\bullet \ \in, \subset, \emptyset$
- These satisfy certain axioms.
- $\bullet\,$ The meaning of the symbols are not given per say... You can read \in as "is an ancester of ".
- The axioms are in fact temporary ones until we find better ones.

• □ ▶ • □ ▶ • □ ▶

Sets

- {}.
- $\bullet \in, \subset, \emptyset$
- These satisfy certain axioms.
- $\bullet\,$ The meaning of the symbols are not given per say... You can read \in as "is an ancester of ".
- The axioms are in fact temporary ones until we find better ones.
- The main reason that they exist is to aid in the proof and to follow the classical logic, and finally to avoid possible self-contradictions such as Russell's.

Sets

- {}.
- $\bullet \in, \subset, \emptyset$
- These satisfy certain axioms.
- $\bullet\,$ The meaning of the symbols are not given per say... You can read \in as "is an ancester of ".
- The axioms are in fact temporary ones until we find better ones.
- The main reason that they exist is to aid in the proof and to follow the classical logic, and finally to avoid possible self-contradictions such as Russell's.
- The set theory can be characterized within the category theory.

• Two sets are equal if and only if they have the same elements.

・ロト ・回 ト ・ ヨト ・ ヨ

- Two sets are equal if and only if they have the same elements.
- A = B and $A \neq B$.

・ロト ・回 ト ・ ヨト ・ ヨ

- Two sets are equal if and only if they have the same elements.
- A = B and $A \neq B$.
- $A \subset B$ is defined as $\forall x (x \in A \rightarrow x \in B)$.

(D) (A) (A) (A)

- Two sets are equal if and only if they have the same elements.
- A = B and $A \neq B$.
- $A \subset B$ is defined as $\forall x (x \in A \rightarrow x \in B)$.
- Reflexivity $A \subset A$.

- Two sets are equal if and only if they have the same elements.
- A = B and $A \neq B$.
- $A \subset B$ is defined as $\forall x (x \in A \rightarrow x \in B)$.
- Reflexivity $A \subset A$.
- Transitivity: $A \subset B$, $B \subset C$ Then $A \subset C$.

・ロト ・同ト ・ヨト ・ヨ

- Two sets are equal if and only if they have the same elements.

- $A \subset B$ is defined as $\forall x (x \in A \rightarrow x \in B)$.
- Reflexivity $A \subset A$.
- Transitivity: $A \subset B$, $B \subset C$ Then $A \subset C$.
- Antisymmetry: $A \subset B$ and $B \subset A$. Then A = B.

Image: Image:

Axiom of specification

• To every set and to any condition *S*(*x*) there corresponds a set *B* whose elements are exactly those of *A* satisfying *S*(*x*).

Axiom of specification

- To every set and to any condition *S*(*x*) there corresponds a set *B* whose elements are exactly those of *A* satisfying *S*(*x*).
- A the set of all men. $\{x \in A | x \text{ is married } .\}$.

(D) (A) (A) (A)

Axiom of a null-set

• A set with no element exists $\{\}$ or \emptyset .

イロト イヨト イヨト イヨト

Axiom of a null-set

- A set with no element exists $\{\}$ or \emptyset .
- $\emptyset \subset A$ for any set A.

イロト イヨト イヨト イヨト

• For any two sets, there exists a set that they both belong to.

- For any two sets, there exists a set that they both belong to.
- Sets X, Y. There exists $Z \ni X, Y$.

イロト イポト イヨト イヨ

- For any two sets, there exists a set that they both belong to.
- Sets X, Y. There exists $Z \ni X, Y$.
- There exists $\{a, b\}$. (To see this use the first item to get a set A and form $\{x \in A | x = a, x = b\}$.

- For any two sets, there exists a set that they both belong to.
- Sets X, Y. There exists $Z \ni X, Y$.
- There exists $\{a, b\}$. (To see this use the first item to get a set A and form $\{x \in A | x = a, x = b\}$.
- Singleton {a} exists.

- For any two sets, there exists a set that they both belong to.
- Sets X, Y. There exists $Z \ni X, Y$.
- There exists $\{a, b\}$. (To see this use the first item to get a set A and form $\{x \in A | x = a, x = b\}$.
- Singleton {a} exists.
- Example: $\{\emptyset\}, \{\emptyset, \{\emptyset\}\}, \{\emptyset, \{\emptyset\}\}, \{\emptyset, \{\emptyset\}\}, \dots$

(日)

• Given a collection of sets, there exists a set *U* that contains all the elements that belong to at least one set in the given collection *C*.

(I) < ((i) <

- Given a collection of sets, there exists a set *U* that contains all the elements that belong to at least one set in the given collection *C*.
- U may be too general.

- Given a collection of sets, there exists a set *U* that contains all the elements that belong to at least one set in the given collection *C*.
- U may be too general.
- We specify $\bigcup_{X \in \mathcal{C}} X := \{x \in U | \exists X \in \mathcal{C} (x \in X)\}.$

- Given a collection of sets, there exists a set *U* that contains all the elements that belong to at least one set in the given collection *C*.
- U may be too general.
- We specify $\bigcup_{X \in \mathcal{C}} X := \{x \in U | \exists X \in \mathcal{C} (x \in X)\}.$
- Example: $\bigcup \{X | X \in \emptyset\} = \emptyset$.

- Given a collection of sets, there exists a set *U* that contains all the elements that belong to at least one set in the given collection *C*.
- U may be too general.
- We specify $\bigcup_{X \in \mathcal{C}} X := \{x \in U | \exists X \in \mathcal{C} (x \in X)\}.$
- Example: $\bigcup \{X | X \in \emptyset\} = \emptyset$.
- \bigcup { $A_1, A_2, ..., A_n$ } = $A_1 \cup A_2 \cup \cdots \cup A_n$.

(I) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1))

• \bigcup { $X | X \in$ {A}} = A.

・ロト ・回 ト ・ヨト ・ヨト

- \bigcup { $X | X \in$ {A}} = A.
- $A \cup \emptyset = A, A \cup B = B \cup A.$
- Prove for example $\{a\} \cup \{b\} \cup \{c\} = \{a, b, c\}.$

(ロ) (部) (E) (E) (E)

- \bigcup { $X | X \in$ {A}} = A.
- $A \cup \emptyset = A, A \cup B = B \cup A.$
- Prove for example $\{a\} \cup \{b\} \cup \{c\} = \{a, b, c\}.$
- $(A \cup B) \cup C = A \cup (B \cup C).$

(ロ) (部) (E) (E) (E)

- \bigcup { $X | X \in$ {A}} = A.
- $A \cup \emptyset = A, A \cup B = B \cup A.$
- Prove for example $\{a\} \cup \{b\} \cup \{c\} = \{a, b, c\}.$
- $(A \cup B) \cup C = A \cup (B \cup C).$
- $A \cup A = A$.

(ロ) (部) (E) (E) (E)

- \bigcup { $X | X \in$ {A}} = A.
- $A \cup \emptyset = A, A \cup B = B \cup A.$
- Prove for example $\{a\} \cup \{b\} \cup \{c\} = \{a, b, c\}$.
- $(A \cup B) \cup C = A \cup (B \cup C).$
- $A \cup A = A$.
- $A \subset B \leftrightarrow A \cup B = B$.

 Every nonempty set has an ∈-least member. That is, if there is some y ∈ x, then there exists z ∈ x for which there is no w ∈ z ∩ x. (There is no element of x that is an element of z).

- Every nonempty set has an ∈-least member. That is, if there is some y ∈ x, then there exists z ∈ x for which there is no w ∈ z ∩ x. (There is no element of x that is an element of z).
- Consequences:

- Every nonempty set has an ∈-least member. That is, if there is some y ∈ x, then there exists z ∈ x for which there is no w ∈ z ∩ x. (There is no element of x that is an element of z).
- Consequences:
- (1) No nonempty set can be a member of itself. No $A = \{A, ...\}...$

- Every nonempty set has an ∈-least member. That is, if there is some y ∈ x, then there exists z ∈ x for which there is no w ∈ z ∩ x. (There is no element of x that is an element of z).
- Consequences:
- (1) No nonempty set can be a member of itself. No $A = \{A, ...\}...$
- (2) If A, B are both nonempty sets, then it is not possible that both A ∈ B and B ∈ A are true.

• (1) Suppose that $\exists A$ such that $A \in A$, and A is not empty, then $\{A\}$ would be a set. A is the only element.

- (1) Suppose that $\exists A$ such that $A \in A$, and A is not empty, then $\{A\}$ would be a set. A is the only element.
- However, in $\{A\}$ there is no z as above.

- (1) Suppose that $\exists A$ such that $A \in A$, and A is not empty, then $\{A\}$ would be a set. A is the only element.
- However, in $\{A\}$ there is no z as above.
- (2) Suppose there exists nonempty sets A and B with $A \in B$ and $B \in A$. Then $\{A, B\}$ is a set.

(日)

- (1) Suppose that $\exists A$ such that $A \in A$, and A is not empty, then $\{A\}$ would be a set. A is the only element.
- However, in $\{A\}$ there is no z as above.
- (2) Suppose there exists nonempty sets A and B with $A \in B$ and $B \in A$. Then $\{A, B\}$ is a set.
- $B \in A \cap \{A, B\}$ since $B \in A$.

- (1) Suppose that $\exists A$ such that $A \in A$, and A is not empty, then $\{A\}$ would be a set. A is the only element.
- However, in {*A*} there is no *z* as above.
- (2) Suppose there exists nonempty sets A and B with $A \in B$ and $B \in A$. Then $\{A, B\}$ is a set.
- $B \in A \cap \{A, B\}$ since $B \in A$.
- $A \in B \cap \{A, B\}$ since $A \in B$.

- (1) Suppose that ∃A such that A ∈ A, and A is not empty, then {A} would be a set.
 A is the only element.
- However, in $\{A\}$ there is no z as above.
- (2) Suppose there exists nonempty sets A and B with $A \in B$ and $B \in A$. Then $\{A, B\}$ is a set.
- $B \in A \cap \{A, B\}$ since $B \in A$.
- $A \in B \cap \{A, B\}$ since $A \in B$.
- Thus there is no z for $\{A, B\}$ since we can keep finding one less than any element.

- (1) Suppose that ∃A such that A ∈ A, and A is not empty, then {A} would be a set.
 A is the only element.
- However, in $\{A\}$ there is no z as above.
- (2) Suppose there exists nonempty sets A and B with $A \in B$ and $B \in A$. Then $\{A, B\}$ is a set.
- $B \in A \cap \{A, B\}$ since $B \in A$.
- $A \in B \cap \{A, B\}$ since $A \in B$.
- Thus there is no z for $\{A, B\}$ since we can keep finding one less than any element.
